DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claims 1-10** are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,411,617 to Kilkki *et al.* ("Kilkki") in view of U.S. Patent No. 6,667,984 to Chao *et al.* ("Chao").
3. As to **claim 1 and 9**, *Kilkki* discloses a communication network comprising one or more interconnected data switches (fig. 8 - element 112) having I/O ports (fig. 8 elements - 116, 117, 122, 123) and at least one virtual port (fig. 8 - elements 118, 120) (column 13, lines 23-41).

Kilkki does not expressly disclose means for subjecting said ports to one contention resolution process.

Chao discloses port contention resolution for an ATM switch (column 12, lines 48-64).

Kilkki does not make any provisioning for the way virtual ports are managed within an ATM switch. Therefore it is interpreted that contention resolution for virtual and physical ports will be handled by the same process.

At the time of invention, it would have been obvious to a person of ordinary skilled in the art to have modified Kilkki to include the function of contention resolution for all ports as taught by Chao. The suggestion/motivation would have been to perform the basic functions of an ATM switch (column 7, lines 24-37).

4. As to **claims 2-4**, Kilkki discloses communication network as to the parent claim wherein the at least one virtual port is a virtual input port (fig. 8 - element 120) or output port (fig. 8 - element 118).

See similar motivation as claim 1.

5. As to **claims 5-8**, Kilkki discloses a communication network as to the parent claim wherein that at least one virtual port (fig. 8 - element 118 or 120) is coupled to at least one resource (fig. 8 - element 110). Also the one resource (fig 8. element 110) is an external resource to the data switch (fig. 8 - element 112) and the one resource is an ATM SIMA Extender which comprises means for configuring data packets for the ATM switch (column 13, lines 23-41).

See similar motivation as claim 1.

6. As to **claim 10**, see similar rejection to claim 1.
